

## Pro/Engineer Layer Object Highlighting

Visually determine which objects a layer contains.

### OVERVIEW:

It can be time consuming to find which layer features and objects have been placed into. One tool I've found is to turn on layer highlighting. With highlighting, clicking on a layer shows an outline of all objects it contains, whether they're currently shown or not.

### TO RUN IT:

- Open 'View>Layers' from the menu bar
- Check Highlight from the Tree dropdown menu
